Yes, the Laplace transform has "applications", but it really seems that the only application is solving differential equations and nothing beyond that. Though, that is not entirely true, there is one more application of the Laplace transform which is not usually mentioned. And that is the moment generating function from probability theory. After all that is the original motivation for the Laplace transform.

The transform method finds its application in those problems which can't be solved directly. This transform is named after the mathematician and renowned astronomer Pierre Simon Laplace who lived in France. He used a similar transform on his additions to the probability theory. It became popular after World War Two. This transform was made popular by Oliver Heaviside.
