This is a review for the fourth edition of Digital Image Processing by Gonzalez and Woods: international edition. I have found that this is one of the best international edition textbooks I have purchased so far, with a few caveats (of course). The book is well bound and is ****in color**** (blue, black, and white most of the book and full color for the chapter that requires it). It is not ...

Region growing is a simple region-based image segmentation method. It is also classified as a pixel-based image seg
method since it involves the selection of initial seed points.. This approach to segmentation examines neighboring pi
initial seed points and determines whether the pixel neighbors should be added to the region.

This image is a greyscale image, each pixel is 8 bits. I compressed it with TIFF and PNG. The uncompressed image is 257KB and has a size of 257KB. The size is smaller than the previous one because it is greyscale, but we will see that because of much more detail than the previous images, the result of compression with lossless
