A supercomputer is a computer with a high level of performance as compared to a general-purpose computer. The performance of a supercomputer is commonly measured in floating-point operations per second instead of million instructions per second (MIPS). Since 2017, there are supercomputers which can perform over 10 17 FLOPS (a hundred quadrillion FLOPS, 100 petaFLOPS or 100 PFLOPS).

Rotation in mathematics is a concept originating in geometry.Any rotation is a motion of a certain space that preserves at least one point.It can describe, for example, the motion of a rigid body around a fixed point. A rotation is different from other types of motions: translations, which have no fixed points, and (hyperplane) reflections, each of them having an entire (n ? 1)-dimensional ...
