Diy Ecu Remap Guide The ECU shuffles through the tons of data that come to it in the form of readings to decide the course of action that should be taken by the engine to ensure an ideal drive. The ECU tells your engine not only what to do but also how to do it. Thus the ECU in order to make accurate diagnosis on engine control utilizes stored data.

There are now many businesses which offer a DIY option for remapping your HDi at home with the use of a low-cost ecu reader/writer. The process is often that you read the original data from the ECU and send it to the tuner via email (these files are very small), they will then make the necessary adjustments and send it back to you. All that needs to be done is to upload (write) this new file to the ECU and your 306 HDi is remapped.

One way to delete the EGR function on a PD engine is to blank it off (you can just leave it shut) and remap the EGR map in the ecu. Removing EGR function by changing the map can still lead to a fault code being flagged. If that happens , change the max settings to about 95% of max rather than 100%. That should prevent a fault code. CHANGING THE EGR MAP. This is the best first change to attempt ...
